## Simulação manual das soluções do problema de produtores e consumidores

Sistemas Concorrentes - Lista 1 - Exercício 2a

Sistemas Concorrentes - PEL - 2018.2 Anny Caroline Correa Chagas

**Enunciado:** Simular **manualmente** as várias soluções do problema dos produtores e consumidores com buffer limitado, com semáforos, apresentadas em sala de aula manualmente e através de Redes de Petri. Serão apresentadas as seguintes simulações manuais:

Tabela 1. Solução "AdHoc" - 1 produtor, 1 consumidor e buffer igual a 2

t12		×			0	0	1		Fila[FimFila] = V

A solução que utiliza 2 semáforos apresenta problemas de concorrência. Na Tabela 4, o produtor P2 sobrescreve o valor escrito por P1 na primeira posição do buffer, enquanto que na Tabela 5, os dois consumidores acessam a mesma posição do buffer.

Tabela 5. Solução com 2 semáforos - 2 produtores, 2 consumidores e TamFila=2 (problemas de concorrência entre os consumidores)
